Rackmount Kit #3468

Dual-instrument 3.5-inch rackmount hardware for models 705, A320, A362, A382, A385

Remove cases from both instruments and use the four short, silver machine screws to join the two cases. Be sure to insert the screws from the side shown above. The two angle brackets may then be fastened to the case with the larger Phillips-head screws. After reinstalling the instruments in cases, the brackets are ready for mounting in a standard 19-inch rack.
